

Ideation Phase

Brainstorming and Prioritization

Date	30 September 2026
Team ID	SWTID-2026-7764
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Use the project walkthrough to prioritize clean imports, duplicate prevention, clear run history, and useful reports.

This working session organizes ideas around the project's actual workflow: prepare the workbook, create the target and staging tables, transform and validate records, then report and share results.

Prioritize prerequisites first. Confirm the five-field schema, create Employee Test and Employee Import, map the fields, set Employee ID coalesce, and finish with reports and dashboard sharing.

Project source: Import Data using Transform Maps project walkthrough and dashboard snapshot.

Step 1: Confirm the five employee fields, source workbook headers, and Employee ID as the coalesce key.

Project ideas and priorities

Deliver a reliable import first, then make validated data useful to report consumers.

DATA FOUNDATION

- 1 Prepare five-column XLSX
- 2 Create u_employee_test
- 3 Create Employee Import staging
- 4 Build Sample Spreadsheet Import
- 5 Map all five String fields

DATA INTEGRITY

- 1 Transform and inspect records
- 2 Coalesce on Employee ID
- 3 Re-import changed and new rows
- 4 Confirm 2 inserted and 2 updated
- 5 Repeat: confirm 4 ignored

INSIGHT AND SHARING

- 1 Create department Pie report
- 2 Create location Bar report
- 3 Create employee list report
- 4 Add reports to dashboard
- 5 Restrict sharing as intended

Step 2: Group work into spreadsheet/table setup, Import Set and Transform Map, validation/coalesce and dashboard sharing controls, and reports/dashboard.

Project ideas and priorities

Deliver a reliable import first, then make validated data useful to report consumers.

DATA FOUNDATION

- 1 Prepare five-column XLSX
- 2 Create u_employee_test
- 3 Create Employee Import staging
- 4 Build Sample Spreadsheet Import
- 5 Map all five String fields

DATA INTEGRITY

- 1 Transform and inspect records
- 2 Coalesce on Employee ID
- 3 Re-import changed and new rows
- 4 Confirm 2 inserted and 2 updated
- 5 Repeat: confirm 4 ignored

INSIGHT AND SHARING

- 1 Create department Pie report
- 2 Create location Bar report
- 3 Create employee list report
- 4 Add reports to dashboard
- 5 Restrict sharing as intended

Step 3: Prioritize valid imports and no unintended duplicates first; then verify Department, authorized project user access, and actionable reports.
