Problem Statements for Spreadsheet Employee Data Import

This document defines the data-import problem and expected outcome for Team SWTID-2026-7764.

The project focuses on consistent spreadsheet headers, accurate field mapping, duplicate handling, and useful employee reports.

Project reference: supplied implementation walkthrough.

Problem statements based on the supplied project walkthrough.

Problem Statement (PS)	I am (Customer)	I'm trying to	But	Because	Which makes me feel
PS-1	ServiceNow import operator	Load and update employee rows from a spreadsheet in a consistent ServiceNow table.	Manual entry and repeated imports can lead to mapping mistakes or duplicate records.	The source arrives as an Excel workbook and must be staged, mapped, transformed, and matched by Employee ID.	Needs a repeatable workflow and clear run outcomes.
PS-2	Report consumer / dashboard owner	Review employee counts by Department and Location and inspect employee details.	List data alone is difficult to summarize and the audience for employee reports must be deliberate.	The project requires grouped reports, a detailed list, and a consolidated dashboard with controlled sharing.	Needs readable analytics for the intended audience.
