Empathy Map for Employee Spreadsheet Import Stakeholders

Working stakeholder hypotheses for this project

This map translates the supplied spreadsheet-import workflow into user needs. It is a project hypothesis, not the result of stakeholder interviews.

Focus on the operator's tasks: prepare the workbook, load and map it, confirm the transform result, and review or share reports.

Working hypotheses for the ServiceNow import operator and report consumer; validate these assumptions with the project team.

Stakeholder empathy map

Project hypotheses from the supplied walkthrough; validate with intended users

THINKS

Can I trust each mapped value?
Will a repeat load create duplicates?
Can I see what changed?

SAYS

I need a repeatable import.
Show employees by department and location.
Keep the record list easy to review.

DOES

Prepares the spreadsheet, loads the import set, checks mappings, runs the transform, and reviews history.

SEES

Staging rows, mapped fields, inserted and updated records, department/location charts, and dashboard sharing controls.

PAIN POINTS

Manual re-entry, mismatched fields, duplicate rows, unclear run outcomes, and scattered reporting.

NEEDS / GAINS

Five consistent fields, Employee ID coalesce, visible run results, three useful reports, and controlled sharing.
