

Project Design Phase-II

Data Flow Diagram & User Stories

Date	30 September 2026
Team ID	SWTID-2026-7764
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Data Flow Diagrams:

Data flow: Sample Spreadsheet.xlsx → Employee Import staging (u_employee_import) → Sample Spreadsheet Import Transform Map (coalesce on Employee ID) → Employee Test (u_employee_test) → three reports → Employee Analytics Dashboard.

Simplified Employee Test import and reporting flow (see project-specific diagram).

User Stories

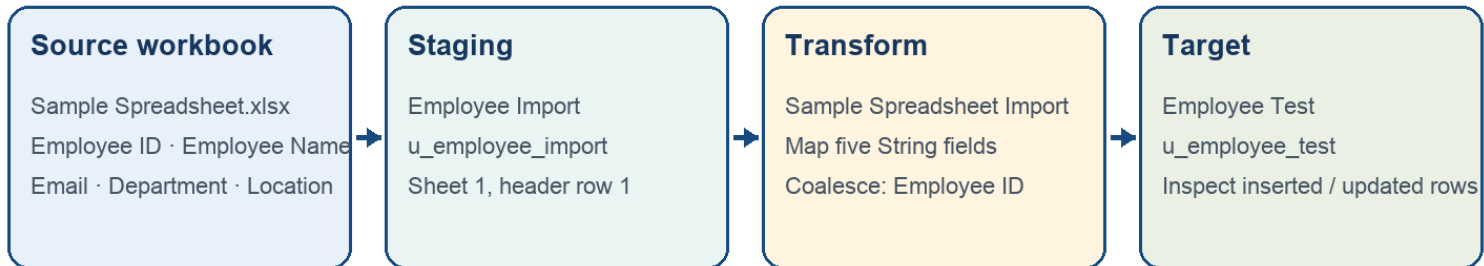

Stories below reflect the supplied implementation phases and Skill Wallet milestone grouping. They cover spreadsheet setup, staging and mapping, transform/coalesce validation, and reports/dashboard sharing.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Import operator	Workbook and target schema	US-01	As an import operator, I want the workbook source headers mapped to the Employee Test schema so employee data is loaded consistently.	Employee Test has String fields Employee ID, Employee Name, Email, Department, and Location. The source column Name maps to Employee Name; the other four source headers match by name.	High	Milestone 1
ServiceNow administrator	Staging and field mapping	US-02	As an administrator, I want Employee Import and Sample Spreadsheet Import configured to stage and map the workbook.	Employee Import (u_employee_import) is the source and Employee Test (u_employee_test) is the target. Map Name to	High	Milestone 2

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
				Employee Name; the other four fields map by name.		
Import operator	Transform and validation	US-03	As an import operator, I want to run the transform and review Employee Test to verify imported values.	Transform completes and target records contain the expected field values.	High	Milestone 3
Data owner	Duplicate prevention	US-04	As a data owner, I want Employee ID coalesce enabled to update matching employees without duplicate records.	Source walkthrough: two inserted, two updated; repeat run: zero inserted, zero updated, four ignored.	High	Milestone 3
Report consumer	Employee reports	US-05	As a report consumer, I want department, location, and employee-list reports to review employee data.	Department Pie/Count; Location Bar/Count; list report includes the five employee fields.	Medium	Milestone 4
Dashboard owner	Dashboard and sharing	US-06	As a dashboard owner, I want the three reports on Employee Analytics Dashboard for the intended audience.	All reports appear; sharing is limited to the selected audience.	Medium	Milestone 4

Project data flow

Spreadsheet intake through validated Employee Test records to analytics

Validation and outputs

- Employee ID coalesce prevents duplicate inserts during repeat loads.
- Reports: Employees by Department (Pie / Count), Employees by Location (Bar / Count), Employee List Report.
- Dashboard: Employee Analytics Dashboards; share with selected users, groups, or roles.
