

Customer Journey Map for Employee Data Import

Team SWTID-2026-7764 | 30 September 2026 | Project workflow based on the supplied ServiceNow walkthrough

This map follows the import operator from workbook preparation through record validation and reporting. It is derived from the supplied project guide; no stakeholder interviews were supplied.

Stage	Operator action	ServiceNow touchpoint / evidence
Prepare	Create the five-column workbook with matching headers.	Sample Spreadsheet.xlsx; Employee ID, Employee Name, Email, Department, Location.
Model	Create the target table and its five String fields.	Employee Test (u_employee_test); form/list field check.
Stage	Load the workbook and review the staged rows.	Employee Import (u_employee_import); sheet 1, header row 1.
Map and transform	Map same-name fields, run Transform, and compare target values.	Sample Spreadsheet Import; Employee Test; transform success/history.
Prevent duplicates	Coalesce on Employee ID and re-import changed/new data.	Four rows: two inserted and two updated; identical repeat: four ignored.
Review and share	Run reports, add them to the dashboard, set intended sharing.	Department Pie/Count, Location Bar/Count, list report; Employee Analytics Dashboards.

Evidence and open items

The walkthrough documents the configuration and the two import outcomes above. Confirm final audience permissions, current screenshots, formal UAT sign-off, and any measured performance thresholds before submission.
