

Project Design Phase-II
Solution Requirements (Functional & Non-functional)

Date	30 September 2026
Team ID	SWTID-2026-7764
Project Name	Import Data using Transform Maps (Spreadsheet)
Maximum Marks	4 Marks

Functional Requirements for Employee Spreadsheet Import and Reporting

The functional requirements below follow the nine phases in the supplied project walkthrough.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Target table and schema	Create Employee Test (u_employee_test) with five String fields: Employee ID (String), Employee Name (String), Email (String), Department (String), and Location (String).
FR-2	Spreadsheet preparation	Prepare Sample Spreadsheet.xlsx with source headers Employee ID, Name, Email, Department, and Location, plus employee sample rows.
FR-3	Import Set staging	Create Employee Import; confirm its staging table name u_employee_import is populated by ServiceNow.
FR-4	Transform Map	Create Sample Spreadsheet Import with Employee Import as source and Employee Test as target.
FR-5	Field mapping	Map the five source columns as follows: Employee ID → Employee ID; Name → Employee Name; Email → Email; Department → Department; Location → Location.
FR-6	Transform and validation	Run the transform and verify target records and values in Employee Test.
FR-7	Coalesce and repeat import	Enable coalesce on Employee ID. Verify existing IDs update and new IDs insert; repeating the same four-row file should not create duplicates.
FR-8	Reports and dashboard	Create Employees by Department (Pie/Count), Employees by Location (Bar/Count), and Employee List Report; add all three to Employee Analytics Dashboard.
FR-9	Sharing and evidence	Apply report/dashboard sharing to the intended users, groups, or roles; retain transform history and configuration evidence.

Non-functional Requirements for Data Integrity and Controlled Sharing

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Data integrity	Map source Name to target Employee Name and the other four source columns to their same-named

		String fields. Preserve Employee ID as the stable matching key.
NFR-2	Repeatability	A repeated import with the same Employee IDs must not create duplicate target records.
NFR-3	Traceability	Retain import and transform history, row counts, and screenshots needed to explain inserts, updates, or ignored rows.
NFR-4	Usability	Use clear table, map, report, and dashboard names and keep the employee list readable.
NFR-5	Controlled sharing	Share reports and dashboards only with the intended users, groups, or roles. Dashboard ACL setup is restricted to an authorized administrator and must follow instance policy.
NFR-6	Maintainability	Document source/target mappings, Employee ID coalesce, report types, and dashboard configuration.
