

Problem–Solution Fit Summary

Project SWTID-2026-7764 | Import Data using Transform Maps (Spreadsheet)

Need

The project walkthrough addresses spreadsheet-based employee data that must be imported, updated reliably, and reviewed through department, location, and detail reports.

Proposed fit

Use a five-field Employee Test target, Employee Import staging, a five-field Transform Map, and Employee ID coalesce. Use ServiceNow Reports and Employee Analytics Dashboards to make the validated data visible.

Walkthrough evidence

Observed run	Reported outcome
Four-row follow-up import	Two new IDs inserted; two existing IDs updated.
Same file submitted again	Zero inserted, zero updated, four ignored.
Reports	Department Pie/Count; Location Bar/Count; Employee List Report.
Dashboard	All three reports added to Employee Analytics Dashboards; share options for users, groups, and roles are documented.

Acceptance still to confirm

The source does not include formal UAT sign-off, measured performance results, reviewer names, or approved dashboard audience. Confirm these items with the team before final submission.
